

FACT SHEET

✓ Who we are

Energy Assets Siteworks team is a **Meter Asset Manager**, providing **metering, site works, data products and advanced metering services**.

Siteworks

We provide a range of energy metering solutions across Britain and have built an excellent reputation in customer service and quality of product, notably through the design of complex meter modules, including larger rotary and turbine meters. This expertise ensures the deployment of bespoke solutions.

- ✓ We're Gas Industry Registration Scheme accredited. Our gas design expertise combines intimate knowledge of legislation, safety standards and operator requirements with a pragmatic and customer-focused business ethos. We deliver new utility connections, disconnections, alterations and outlet pipework projects.
- ✓ Over the last 16 years, we have completed thousands of connections for a wide range of organisations including gas suppliers, local authorities, consultants, developers and contractors. From simple gas connections to extensive utility networks, we pride ourselves on offering the same high level of customer service irrespective of the job ... and always at a competitive price.

✂ Our offer

We provide free, comprehensive and accurate quotes for our customers. Quotes cover all aspects of the project from design, delivery and implementation of the gas meter and infrastructure.

🔥 Our services

With our Siteworks offer, customers can choose from a range of gas design and metering options – and once the plans are agreed, a dedicated Planner and your Account Manager will be with you from project initiation through to completion.

🧩 Flexibility and quality

We provide a complete design, planning and construction solution for a new gas connection, including the excavation and laying of pipework. This can be delivered as complete solution or as individual elements – but whatever our customers choose, we manage gas network supply and all necessary industry data flows as part of our flexible service offer.

Energy Assets is one of Britain's leading and fastest growing independent metering services, asset management and utility network construction companies. Energy Assets owns, operates and maintains I&C advanced gas and electricity meters, Automated Meter Reading units (AMR) and final mile connections for local gas networks via Energy Assets Pipelines and electricity networks through Energy Assets Networks. We also own assets linked to the growing market for 'fibre-to-the-home' through Energy Assets Fibre. We deliver a progressive asset adoption model for housebuilding and industrial and commercial markets, including ownership of low carbon infrastructure.
