

EA Connections

ENERGYASSETS

Net Zero

Who we are

As one of the leading connection providers for the industrial and commercial sector, we partner with developers, energy suppliers, energy consultants and embedded generation providers to help energise Britain's infrastructure.

- We're **GIRS**, **WIRS** and **NERS** accredited. Our design expertise combines our knowledge of legislation, safety standards and operator requirements with a pragmatic and customer-focused business ethos.

We deliver new utility connections, disconnections, alterations and, where required for gas, outlet pipework projects.

- We've completed **thousands of connections** for a huge range of organisations. From simple connections to bespoke and complex projects, we pride ourselves on offering the same **high level of customer service** regardless of the job – and always at a competitive price.
- We currently have **1.8 million assets** under management across gas, electricity and water.

What we offer

We offer a range of multi-utility metering and connection services and have built an excellent reputation in product quality, notably through the design of complex meter modules including larger rotary and turbine meters.

Our multi-utility service offering includes:

- ✓ New service connections
- ✓ Service alterations
- ✓ Meter installations
- ✓ Meter relocations
- ✓ Meter removals
- ✓ Supply disconnections
- ✓ Meter housing maintenance
- ✓ Technical consultation
- ✓ Works upstream and downstream of the meter (outlet pipework)
- ✓ Technical audit and compliance surveys
- ✓ Intermediate pressure connections metering
- ✓ Electric vehicle charge point design, installation and maintenance

Why use us?

The benefits you can expect from working with us include:

-  **Power to choose**
We offer a wide range of design and metering options, either as a complete solution or as individual elements.
-  **Free, comprehensive estimates**
Timely, accurate and competitive quotes that cover all aspects of your project from design to delivery and implementation.
-  **Nationwide coverage**
Our local offices and field service engineers nationwide ensure a responsive service.
-  **No job too big**
We have extensive experience designing complex meter modules, including larger rotary and turbine meters.
-  **End-to-end service**
Complete design, planning, project management and construction solutions for new connections, including excavating, laying pipework and cables and all necessary data flows.
-  **Reliable, efficient and safe delivery**
Our accredited utility design expertise combines in-depth knowledge of legislation, safety standards and operator requirements.
-  **Network ownership**
We're an IGT and an IDNO, meaning we're authorised to own and manage final mile gas and electricity networks. We take care to ensure utilities are delivered to end users safely and reliably.
-  **Expert design team**
Our in-house teams will create tailored solutions around your specific requirements.
-  **A name you can trust**
For almost 20 years, we've completed 1,000s of connections for a huge range of organisations. Our extensive knowledge helps us to foresee and mitigate any risk associated with your project.
-  **A single point of contact**
Once plans are agreed, dedicated Delivery Coordinators and Account Managers will be with you from project beginning to end.
-  **Flexibility and quality**
We'll work with you to provide design, planning and construction, reducing completion timescales.

How can we help?

Local, nationally

Our network of offices and warehouse facilities is strategically placed around Britain so we can provide a responsive service. Our fixed locations are complemented by field services engineers and site teams operating across the country.

As a leading and fast-growing independent metering services, asset management and utility network construction companies, we partner with a huge range of organisations including suppliers, local authorities, consultants, developers and contractors.

We own, operate and maintain I&C advanced multi-utility meters, Automated Meter Reading units (AMR) and final mile connections for local gas networks as Energy Assets Gas Networks and electricity networks as Energy Assets Electricity Networks. We also own assets linked to the growing market for 'fibre-to-the-home' as Energy Assets Fibre. We deliver a progressive asset adoption model for housebuilding and industrial and commercial markets, including ownership of low carbon infrastructure.

As Energy Assets Net Zero, we provide a range of low carbon solutions to help you achieve your Net Zero ambitions.
